Experiment -1

AIM: To create an AWS free tier account to provision the resources.

Description:

Amazon Web Services (AWS) is a cloud computing platform that provides various services such as virtual servers, storage, databases, and networking. It helps users access computing resources over the internet.

An AWS account is required to access the AWS Management Console and create cloud resources. The AWS Free Tier provides limited free usage of selected services based on eligibility rules, service limits, and time periods.

Steps:

1. Open a web browser and visit the official AWS website: https://aws.amazon.com/
2. Select “Create an AWS Account” and enter a valid email address, account name and password.
3. Verify the email address using the verification code sent by AWS.
4. Enter the required contact details and select the appropriate account type.
5. Provide the requested payment details and complete the identity verification process. A payment 76method may be required even when using Free Tier services.
6. Choose a support plan and complete the account registration.
7. Sign in to the AWS Management Console and check the Free Tier page to review eligible services and usage limits.
8. Before creating resources, review the pricing details, set up a billing alert or budget, and avoid launching services that may incur charges.

Output:

1. The AWS account was successfully created and verified.
2. The AWS Management Console was accessed using the registered account.
3. The Free Tier page was viewed to identify eligible services and their usage limits.
4. Thus, an AWS account was created to provision cloud resources.
